ADVANCED

Hit the Goal

INSTRUCTIONS:

Goal of the Project:

In Class 88, you learned to add movements of an image on keypress events, and have also learned the x and y coordinate system of canvas in depth.

In this project, you will focus on moving a ball using the arrow keys to hit a goal.

Story:

Let's make a simple golf game, where we move the ball using arrow keys (up/ down/ left/ right) to reach the hole in a golf course.

When the ball hits the goal, it should be removed from the canvas, and **"You have Hit the Goal!!!"** should be displayed on the header and the canvas border should become red in color.

The table below shows the different keys and their respective **ASCII** values to upload images:

Key	ASCII Value
left	37
right	39
up	38
down	40

*Click here to see the output video.

Getting Started:

1. Click on the Project Template
2. **Unzip** this folder.
3. Rename the downloaded unzipped folder as **Project 88.**
4. **Import** this folder **into VS Code**.
5. Start making changes.

Specific Tasks to Complete the Project:

1. Create a canvas element in the **index.html** file.

```
<canvas width="1100" height="500" id="myCanvas"></canvas>
```

2. Create a canvas variable in the **main.js** file.

```
var canvas = new fabric.Canvas('myCanvas');
```

3. Set initial positions for the ball and hole images.

```
ball_y=0;
ball_x=0;
hole_y=400;
hole_x=800;
```

4. Upload the golf image on the canvas using the **load_img()** function.

```
function load_img(){
    fabric.Image.fromURL("golf-h1.png", function(Img) {
        hole_obj = Img;
        hole_obj.scaleToWidth(50);
        hole_obj.scaleToHeight(50);
        hole_obj.set({
            top:hole_y,
            left:hole_x
        });
        canvas.add(hole_obj);
        });
    new_image();
}
```

5. Upload the ball image on the canvas using the **new_image()** function.

```
function new_image()
{
    fabric.Image.fromURL("ball.png", function(Img) {
    ball_obj = Img;
    ball_obj.scaleToWidth(50);
    ball_obj.scaleToHeight(50);
    ball_obj.set({
    top:ball_y,
    left:ball_x
    });
    canvas.add(ball_obj);
    });
}
```

6. Check if the coordinates of the ball and hole images match. If they match, then, remove the ball from the canvas.

```
if((ball_x==hole_x)&&(ball_y==hole_y)){
    canvas.remove(ball_obj);
```

7. If coordinates of the ball and hole images match, then, display “You have Hit the Goal!!!” and change the canvas border to ‘red’ color.

```
document.getElementById("hd3").innerHTML="You have Hit the Goal!!!";
document.getElementById("myCanvas").style.borderColor="red";
```

8. Define the ‘up’, ‘down’, ‘left’, and ‘right’ functions to move the ball.

```
function down()
{
    if(ball_y <=450)
    {
        ball_y = ball_y + block_image_height;
        console.log("block image height = " + block_image_height);
        console.log("When Down arrow key is pressed, X =  " + ball_x + " , Y = "+ball_y);
        canvas.remove(ball_obj);
        new_image();
    }
}
```

ADVANCED

Hit the Goal

Submitting the Project:

1. **SAVE** all the changes made to the project.
2. Click **Go-Live** to check if it is working.
3. To host your code as a website, follow the instructions given in this document.
4. Once you have hosted the website, copy the **GitHub** link and submit it on the **Student Dashboard > Projects** panel against the correct Class Number.

Hints:

1. Define a function of **fabric.js** for uploading an image on the canvas.

```
fabric.Image.fromURL("ball.png", function(Img) {
```

2. Set the different x coordinates for each image, so that images do not overlap.

3. Use the event listener – **addEventListener** to load an image on the click of a specific key.

```
window.addEventListener("keydown", my_keydown);
```

4. Provide the same width and height to both (ball and hole) images.

```
ball_obj.scaleToWidth(50);
ball_obj.scaleToHeight(50);
```

REMEMBER... Try your best, that's more important than being correct.
After submitting your project, the teacher will give you feedback on your project work.
